² Policy and International Health, WHO Collaborating Centre on Investment for Health & Well-being, Public Health Wales

Acknowledgements

The Home Office funded this work through the Police Transformation fund (ref: PR-105).

We would like to express our gratitude to all of those who participated in the evaluation, including police officers and multi-agency partner staff working across the Dyfed Powys, Gwent, North Wales and South Wales police forces.

Thank you to the National ACE Coordinator Service, Barnardo's Cymru, for allowing the research team full access to all elements of the ACE TIME training.

Thank you to Dyfed Powys, Gwent, North Wales and South Wales police forces, particularly the Local Delivery Teams within each force, for supporting the delivery of the training and providing the research team with the access to carry out the evaluation.

We would like to thank Bethan Jones, Dr Jo Roberts, Dr Catherine Foster and Felicity Morris for their contribution to data collection, and the national programme team for continued support and guidance.

We would like to thank Will Hardy, Bangor University for his quality assurance of the findings reported throughout.

Finally, we would like to thank Professor Karen Hughes and Dr Rebecca Hill for reviewing the report and providing feedback.

Appendix 2

Table 1: Bayes factor evidence categories

Bayes factor	Strength of evidence
> 100	Extreme evidence for a difference (i.e., alternative hypothesis; \mathcal{H}_1)
30 - 100	Very strong evidence for a difference (i.e., alternative hypothesis; \mathcal{H}_1)
10 - 30	Strong evidence for a difference (i.e., alternative hypothesis; \mathcal{H}_1)
3 - 10	Moderate evidence for a difference (i.e., alternative hypothesis; \mathcal{H}_1)
1 - 3	Anecdotal evidence for a difference (i.e., alternative hypothesis; \mathcal{H}_1)
1	No evidence for a difference (i.e., alternative hypothesis; \mathcal{H}_1)
1/3 - 1	Anecdotal evidence for a difference (i.e., alternative hypothesis; \mathcal{H}_0)
1/10 - 1/3	Moderate evidence for no difference (i.e., null hypothesis; \mathcal{H}_0)
1/30 - 1/10	Strong evidence for no difference (i.e., null hypothesis; \mathcal{H}_0)
1/100 - 1/30	Very strong evidence for no difference (i.e., null hypothesis; \mathcal{H}_0)
< 1/100	Extreme evidence for no difference (i.e., null hypothesis; \mathcal{H}_0)

Note. This is A descriptive and approximate classification scheme for the interpretation of Bayes factors BF10 (Lee & Wagenmakers [2013](#); adjusted from Jeffrey's [1961](#)).

2 3.1. Confidence in understanding of working with vulnerability, ACEs and their impact

Table 2: Paired samples t-test. Mean confidence change from pre to post-training (police sample)

Confidence working with...	BF ₁₀	Evidence for _{H1}	Error %	Effect size	95% CI	Wide prior	Ultra wide prior
Vulnerability	3.896e+19	Extreme	3.351e-26	-.38	-.46, -.31	3.107e+19	2.348e+19
ACEs	4.977e+228	Extreme	3.050e-232	-1.87	-2.0, -1.74	6.253e+228	7.304e+134

Note. BF₁₀ = Bayes factor for alternative hypothesis, CI = credible interval, H₁ = alternative hypothesis. Default Cauchy prior used (.707). Bayes factor produced at a wide and ultra wide prior for robustness check.

Table 3: Paired samples t-test. Mean confidence change from pre to post-training (MA partner sample)

Confidence working with...	BF ₁₀	Evidence for _{H1}	Error %	Effect size	95% CI	Wide prior	Ultra wide prior
Vulnerability	1418	Extreme	8.198e-9	-.42	-.61, -.23	1155.58	886.67
ACEs	1.778e+29	Extreme	6.664e-36	-1.47	-1.73, -1.23	2.112e+29	2.267e+29

Note. BF₁₀ = Bayes factor for alternative hypothesis, CI = credible interval, H₁ = alternative hypothesis. Default Cauchy prior used (.707). Bayes factor produced at a wide and ultra wide prior for robustness check.

3.1.1 Confidence pre to post-training by demographic

Table 4: Independent samples t-test. Pre-training confidence scores by gender (police sample)

Confidence working with...	BF ₁₀	Evidence for _{H1}	Error %	Effect size	95% CI	Wide prior BF ₁₀	Ultra wide prior BF ₁₀
Vulnerability	.15	Moderate evidence for _{H0}	.00	-.08	-.22, .06	.11	.08
ACEs	.12	Moderate evidence for _{H0}	.00	-.06	-.20, .08	.09	.06

Note. BF₁₀ = Bayes factor for alternative hypothesis, CI = credible interval, _{H1} = alternative hypothesis, _{H0} = null hypothesis. Default Cauchy prior used (.707). Bayes factor produced at a wide and ultra wide prior for robustness check.

Table 5: Independent samples t-test. Pre-training confidence scores by gender (MA partners sample)

Confidence working with...	BF ₁₀	Evidence for _{H1}	Error %	Effect size	95% CI	Wide prior	Ultra wide prior
Vulnerability	.33	Moderate evidence for _{H0}	.02	-.17	-.60, .24	.24	.18
ACEs	.87	Anecdotal evidence for _{H0}	.00	-.34	-.77, .07	.69	.53

Note. BF₁₀ = Bayes factor for alternative hypothesis, CI = credible interval, _{H1} = alternative hypothesis, _{H0} = null hypothesis. Default Cauchy prior used (.707). Bayes factor produced at a wide and ultra wide prior for robustness check.

**Table 6: One way ANOVA with repeated measures. Confidence pre to post-training by demographic (police sample)**

Confidence working with...	BF₁₀ time	Error %	BF₁₀ gender	Error %	BF₁₀ 2x main effect	Error %	BF₁₀ interaction	Error %	Cross product	Evidence for interaction_{H1}
Vulnerability	2.901e+19	2.44	5.51	.82	1.731e+20	2.45	6.513e+20	2.45	3.76	Moderate
Confidence working with...	BF₁₀ time	Error %	BF₁₀ force area	Error %	BF₁₀ 2x main effect	Error %	BF₁₀ interaction	Error %	Cross product	Evidence for interaction_{H1}
Vulnerability	4.095e+19	.97	.128	.41	6.091e+18	2.34	5.099e+19	1.57	8.37	Moderate

Note. This analysis utilises the strategy highlighted in Wagenamakers (2018), but instead assesses evidence for the interaction. BF_{10} = Bayes factor for alternative hypothesis, CI = credible interval, H_1 = alternative hypothesis, H_0 = null hypothesis. Default Cauchy prior used (.707). Bayes factor produced at a wide and ultra wide prior for robustness check.

Table 7: Independent samples t-test. Post training confidence scores by gender (police sample)

Confidence working with...	BF₁₀	Evidence for_{H1}	Error %	Effect size	95% CI	Wide prior	BF₁₀	Ultra wide prior
Vulnerability	232.80	Extreme	7.339e-7	-.31	-.45, -.15	179.10	132.64	
ACEs	226093	Extreme	7.210e-10	-.42	-.57, -.27	183925.13	140867.02	

Note. BF_{10} = Bayes factor for alternative hypothesis, CI = credible interval, H_1 = alternative hypothesis, H_0 = null hypothesis. Default Cauchy prior used (.707). Bayes factor produced at a wide and ultra wide prior for robustness check.

Table 8: Independent samples t-test. Post-training confidence scores by gender (MA Partners sample)

Confidence working with...	BF_{10}	Evidence for H_1	Error %	Effect size	95% CI	Wide prior	Ultra wide prior
Vulnerability	5.43	Moderate	.00	-.57	-1.05, -.12	4.81	3.95
ACEs	64.62	Very strong	5.688e-5	-.80	-1.29, -.34	62.90	55.65

Note. BF_{10} = Bayes factor for alternative hypothesis, CI = credible interval, H_1 = alternative hypothesis, H_0 = null hypothesis. Default Cauchy prior used (.707). Bayes factor produced at a wide and ultra wide prior for robustness check.

Table 9: One-way ANOVA. Pre-training differences in confidence scores by force area (police sample)

Confidence working with...	BF_{10}	Evidence for H_1	Error %
Vulnerability	4.83	Moderate	8.975e+4
ACEs	.29	Moderate evidence for H_0	.00

Note. BF_{10} = Bayes factor for alternative hypothesis, CI = credible interval, H_1 = alternative hypothesis, H_0 = null hypothesis.

Table 10: One way ANOVA post hoc analysis. Pre-training differences in confidence working with vulnerability by force area (police sample)

Force area	Force area comparison	BF_{10} U	Evidence for H_1	Error %
South Wales	Dyfed Powys	22.97	Strong	3.894e-7
	Gwent	12.66	Strong	4.211e-7
	North Wales	43.38	Very strong	3.926e-7

Note. BF_{10} = Bayes factor for alternative hypothesis, CI = credible interval, H_1 = alternative hypothesis, H_0 = null hypothesis.
The "U" in the Bayes factor denotes that it is uncorrected.

**Table I 1: One-way ANOVA. Pre-training differences in confidence scores by force area (MA partners sample)**

Confidence working with...	BF_{10}	Evidence for H_1	Error %
Vulnerability	.21	Moderate evidence for H_0	.01
ACEs	.12	Moderate evidence for H_0	.00

Note. BF_{10} = Bayes factor for alternative hypothesis, CI = credible interval, H_1 = alternative hypothesis, H_0 = null hypothesis.

Table I 2: Post hoc paired t-tests. Pre to post-training for the different genders and force area (police sample)

Confidence working with vulnerability by demographic	BF_{10}	Error%	Evidence for H_1
Male	4.103e+6	8.011e-10	Extreme
Female	5.468e+12	1.701e-16	Extreme
Dyfed Powys	32589.41	2.269e-10	Extreme
Gwent	2.368e+13	1.199e-17	Extreme
North Wales	42091.25	4.828e-9	Extreme
South Wales	.17	5.297e-4	Moderate for H_0

Note. BF_{10} = Bayes factor for alternative hypothesis, CI = credible interval, H_1 = alternative hypothesis, H_0 = null hypothesis. Default Cauchy prior used (.707). Bayes factor produced at a wide and ultra wide prior for robustness check.

Table I3: One-way ANOVA. Post-training differences in confidence scores by force area (police sample)

Confidence working with...	BF_{10}	Evidence for H_1	Error %
Vulnerability	.01	Very strong evidence for H_0	.03
ACEs	.01	Very strong evidence for H_0	.03

Note. BF_{10} = Bayes factor for alternative hypothesis, CI = credible interval, H_1 = alternative hypothesis, H_0 = null hypothesis.

Table I4: One-way ANOVA. Post-training differences in confidence scores by force area (MA partners sample)

Confidence working with...	BF_{10}	Evidence for H_1	Error %
Vulnerability	.27	Moderate evidence for H_0	1.412e-4
ACEs	.08	Strong evidence for H_0	.00

Note. BF_{10} = Bayes factor for alternative hypothesis, CI = credible interval, H_1 = alternative hypothesis, H_0 = null hypothesis.

Table I5: One-way ANOVA. Pre-training differences in confidence scores by job roles (police sample)

Confidence working with...	Pre-training BF_{10}	Evidence for H_1	Error %	Post-training BF_{10}	Evidence for H_1	Error %
Vulnerability	.01	Extreme evidence for H_0	.01	.01	Extreme evidence for H_0	.04
ACEs	.44	Anecdotal evidence for H_0	9.326e-8	.05	Strong evidence for H_0	.01

Note. BF_{10} = Bayes factor for alternative hypothesis, CI = credible interval, H_1 = alternative hypothesis, H_0 = null hypothesis.

Table I6: One-way ANOVA. Pre-training differences in confidence scores by job sector (MA partner sample)

Confidence working with...	Pre-training BF ₁₀	Evidence for _{H1}	Error %	Post-training BF ₁₀	Evidence for _{H1}	Error %
Vulnerability	.10	Moderate evidence for _{H0}	.00	.20	Moderate evidence for _{H0}	.06
ACEs	1.12	Anecdotal evidence for _{H0}	7.831e-5	.85	Anecdotal evidence for _{H0}	8.306e-5

Note. BF₁₀ = Bayes factor for alternative hypothesis, CI = credible interval, _{H1} = alternative hypothesis, _{H0} = null hypothesis.

3.1.2. Confidence submitting vulnerability referrals (police)

Table I7: One-way ANOVA with repeated measures. Pre to post-training confidence about when to submit a vulnerability referral by force area (police sample)

Confidence in understanding about...	BF ₁₀ Time	Error %	BF ₁₀ Force Area	Error %	BF ₁₀ 2x Main Effect	Error %	BF ₁₀ Interaction	Cross Product	Error %	Evidence for Interaction _{H1}
...when to submit a vulnerability referral	145955.88	1.45	155.15	4.36	4.193e+7	1.11	4.681e+10	116.38	1.47	Extreme

Note. This analysis utilises the strategy highlighted in Wagenamakers (2018), but instead assesses evidence for the interaction. BF₁₀ = Bayes factor for alternative hypothesis, CI = credible interval, _{H1} = alternative hypothesis, _{H0} = null hypothesis. Default Cauchy prior used (.707). Bayes factor produced at a wide and ultra wide prior for robustness check.

Table 18: Post hoc paired samples t-tests. Pre to post-training confidence about when to submit a vulnerability referral by force area (police sample)

Confidence in understanding about when to submit a vulnerability referral	BF_{10}	Error%	Effect Size	95% CI	Evidence for H_1	Wide Prior	Ultra Wide Prior
Dyfed Powys	3.23	5.073e-6	-.26	-.46, -.07	Moderate	2.44	1.79
Gwent	1.461e+10	4.893e-14	-.46	-.58, -.34	Extreme	1.214e+10	9.414e+9
North Wales	.11	.00	-.05	-.20, .09	Moderate evidence for H_0	$BF_{01} = 13.14$	$BF_{01} = 18.51$
South Wales	.09	.00	.02	-.14, .18	Moderate evidence for H_0	$BF_{01} = 14.97$	$BF_{01} = 21.09$

Note. BF_{10} = Bayes factor for alternative hypothesis, CI = credible interval, H_1 = alternative hypothesis, H_0 = null hypothesis. Default Cauchy prior used (.707). Bayes factor produced at a wide and ultra wide prior for robustness check.

Table 19: One-way ANOVA. Pre and post-training differences between the force areas pre and post-training (police sample)

Confidence in understanding about...	Time	BF_{10}	Evidence for H_1	Error %
...when to submit a vulnerability referral	Pre-training	870.96	Extreme	.00
	Post-training	2.07	Anecdotal	1.206e-4

Note. BF_{10} = Bayes factor for alternative hypothesis, CI = credible interval, H_1 = alternative hypothesis, H_0 = null hypothesis. Bayes factor produced at a wide and ultra wide prior for robustness check.

Table 20: Post hoc analysis differences by force area (pre-training). Confidence about when to submit a vulnerability referral (police sample)

Force Area	Force Area Comparison	BF U	Evidence for H1	Error %
South Wales	Dyfed Powys	244.66	Extreme	3.551e-8
	Gwent	7.96e+03	Extreme	3.596e-7
	North Wales	64.55	Very strong	2.647e-7

Note. BF₁₀ = Bayes factor for alternative hypothesis, CI = credible interval, H₁ = alternative hypothesis, H₀ = null hypothesis. Bayes factor produced at a wide and ultra-wide prior for robustness check. The "U" in the Bayes factor denotes that it is uncorrected.

3.2 Anti-Social Behaviour Scenarios - Professional Judgement/Decision Making

Table 21: Paired sample t-tests. Mean change for professional judgement and decision making (ASB) pre to post-training (police sample)

	BF₁₀	Evidence_{H1}	Error %	Effect size	95% CI	Wide prior	Ultra wide prior
Criminal Activity	1.405e+25	Extreme	1.027e-31	-.44	-.52, -.36	1.154e+25	8.889e+24

Health and well-being	Safe-guarding/social care and family support services	9.62	Moderate	1.949e-5
Health and well-being	Miscellaneous	11.77	Strong	5.652e-5

Note. BF_{10} = Bayes factor for alternative hypothesis, CI = credible interval, H_1 = alternative hypothesis, H_0 = null hypothesis. Bayes factor produced at a wide and ultra wide prior for robustness check. The "U" in the Bayes factor denotes that it is uncorrected.

**Table 84: Differences in participant ratings for the trainings usefulness of increasing knowledge by demographic (police sample)**

How useful was the training in increasing your knowledge on...	BF ₁₀ Force area	Error %	Evidence for a difference _{H1}	BF ₁₀ Between genders	Error %	Evidence for a difference _{H1}	BF ₁₀ Between job sector	Error %	Evidence for a difference _{H1}
1.What ACEs are	.01	.05	Extreme evidence for _{H0}	.35	4.674e-4	Anecdotal evidence for _{H0}	.103	.01	Moderate evidence for _{H0}
2.The potential impact of ACEs on the life course	.03	.02	Very strong evidence for _{H0}	2.02	7.908e-5	Anecdotal	.09	.01	Strong evidence for _{H0}
3.The role of resilience in mitigating the impact of ACEs	.34	.00	Anecdotal evidence for _{H0}	.59	2.692e-4	Anecdotal evidence for _{H0}	7.48	.00	Moderate
4.The impact trauma can have on brain development	.01	.05	Extreme evidence for _{H0}	1.391	1.110e-5	Strong	.46	8.386e-6	Anecdotal evidence for _{H0}
5.The benefits of working together with partners to prevent and mitigate ACEs and related trauma	.01	.10	Extreme evidence for _{H0}	129.20	1.163e-6	Extreme	.92	.05	Anecdotal evidence for _{H0}
6.The consideration of ACEs in understanding root causes of behaviour	.01	.03	Very strong evidence for _{H0}	9.63	1.626e-5	Moderate	.81	7.297e-5	Anecdotal evidence for _{H0}
7.Breaking intergenerational cycles of abuse through ACE informed approaches	.01	.03	Very strong evidence for _{H0}	26.72	5.773e-6	Strong	.72	4.401e-6	Anecdotal evidence for _{H0}

Note. BF₁₀ = Bayes factor for alternative hypothesis, CI = credible interval, _{H1} = alternative hypothesis, _{H0} = null hypothesis. Default Cauchy prior used (.707). Bayes factor produced at a wide and ultra wide prior for robustness check.

Table 85: Differences in participant ratings for the trainings usefulness of increasing knowledge by demographic (MA partner sample)

How useful was the training in increasing your knowledge on...	BF ₁₀ Area of work	Error %	Evidence for a difference _{H1}	BF ₁₀ Between genders	Error %	Evidence for a difference _{H1}	BF ₁₀ Between job sector	Error %	Evidence for a difference _{H1}
1.What ACEs are	.20	4.491e-4	Moderate for _{H0}	.62	.01	Anecdotal for _{H0}	.06	.00	Strong for _{H0}
2.The potential impact of ACEs on the life course	.16	7.034e-4	Moderate for _{H0}	.48	.00	Anecdotal for _{H0}	.07	.00	Strong for _{H0}
3.The role of resilience in mitigating the impact of ACEs	.18	4.834e-4	Moderate for _{H0}	.54	.00	Anecdotal for _{H0}	.16	6.747e-4	Moderate for _{H0}
4.The impact trauma can have on brain development	.27	2.525e-4	Moderate for _{H0}	.33	.00	Moderate for _{H0}	.91	4.147e-5	Anecdotal for _{H0}
5.The benefits of working together with partners to prevent and mitigate ACEs and related trauma	.11	.00	Moderate for _{H0}	.30	.00	Moderate for _{H0}	.16	6.057e-4	Moderate for _{H0}
6.The consideration of ACEs in understanding root causes of behaviour	.50	2.591e-5	Anecdotal for _{H0}	.26	.00	Moderate for _{H0}	.62	2.187e-5	Anecdotal for _{H0}
7.Breaking intergenerational cycles of abuse through ACE informed approaches	.10	.00	Moderate for _{H0}	.26	.00	Moderate for _{H0}	.52	1.295e-5	Anecdotal for _{H0}

Note. BF₁₀ = Bayes factor for alternative hypothesis, CI = credible interval, _{H1} = alternative hypothesis, _{H0} = null hypothesis. Default Cauchy prior used (.707). Bayes factor produced at a wide and ultra wide prior for robustness check.

Table 86: One way ANOVA post hoc analysis. Difference in the usefulness of the training in increasing knowledge on statement 3 by job role (police sample)

Job role	Job role comparison	BF ₁₀ U	Evidence for _{H1}	Error %
PCSO	PC	98.26	Very strong	9.164e-9

Note. BF₁₀ = Bayes factor for alternative hypothesis, CI = credible interval, _{H1} = alternative hypothesis, _{H0} = null hypothesis. Bayes factor produced at a wide and ultra wide prior for robustness check. The "U" in the Bayes factor denotes that it is uncorrected.

Table 87: Differences in participant ratings for quality of the training by demographic (police sample)

ACE Informed Approach Statements	BF ₁₀ Force area	Error %	Evidence for a difference _{H₁}	BF ₁₀ Between genders	Error %	Evidence for a difference _{H₁}	BF ₁₀ Between job role	Error %	Evidence for a difference _{H₁}
Organisation of training	.12	.00	Moderate evidence for _{H₀}	.71	2.424e-4	Anecdotal evidence for _{H₀}	.32	4.94e-5	Moderate evidence for _{H₀}
